For model CSAZ-802F, up to 5 digital RGB fans can be controlled by the motherboard. For model CSAZ-802F, please plug all digital RGB fans into an RGB 5V connector on a WS2812B-compliant motherboard. The digital RGB fans can then be controlled using the motherboard's native lighting control software. If you do not have a WS2812B-compliant motherboard that supports digital RGB lights, then you can connect the digital RGB fans into the included RF receiver instead, and control them using the included RF controller. To prevent the connector on a WS2812B motherboard or the RF receiver from shorting out, please do not daisy-chain more than 5 digital RGB fans together.
